

Accelerated Stability

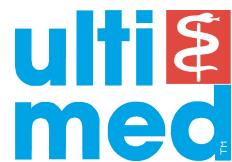

Accelerated Stability of the Drug-Adulteration Test Strips was evaluated using samples from three different lots. These were placed in an incubator with the temperature calibrated at 45°C and relative humidity (RH) calibrated at 60%. A series of stability tests were performed at 0, 7, 14, 21, 28, 35, 42, 56 and 77 days. Test strips were assayed using Creatinine, Glutaraldehyde, Nitrite, PCC/Oxidant, pH and Specific gravity standard solution. Run five replicates per sample for day 0 and one strip per sample for other time points. Read result at 1-2 minutes according to the color chart.

Conclusion: The Drug-Adulteration Test Strips is stable at 45°C for 77 days. These data were plotted on an Arrhenius Plot and the shelf life of this product was determined to be at least 24 months from the date of production when stored properly in unopened canister with desiccant.
